

ASP.NET 5

Single Page Applications

Building Single Page Applications using ASP.NET 5, Angular 2 & TypeScript

Step by step walkthrough on how to build clean, scalable Single Page Applications using the latest ASP.NET 5 framework as middleware and Angular 2 with TypeScript on the front-end side.

📖 [Read post](#)

The project is a [chsakell's Blog's](#) genuine contribution and distributed under MIT licence

ASP.NET 5

ASP.NET 5 is a new open-source and cross-platform framework for building modern cloud-based Web applications using .NET.

[More Info](#)

Angular 2

Angular is a development platform for creating applications using modern web standards. It includes essential features such as mobile gestures, animations, routing and data

TypeScript

TypeScript lets you write JavaScript the way you really want to. TypeScript is a typed superset of JavaScript that compiles to plain JavaScript. Any browser. Any host. Any OS.

Entity Framework 7

EF7 is a lightweight and extensible version of Entity Framework that enables new platforms and new data stores.
