元 件 能

● Suedo Code

以Vue為例

**Main.vue**

**Calendar.vue**

```
<template>
  <!-- Define Html Template -->
  <div> ... </div>
</template>
```

```
<script>
  // Define js logic
  export default {
    name: "Calendar",
    data() {
      return {
        ...
      }
    },
  }
</script>
```

```
<style lang="scss" scoped>
  // Define Scss
  ...
</style>
```

```
<template>
  <!-- Define Html Template -->
  <Calendar/>
</template>

<script>
  // Define js logic
  import Calendar from 'Calendar.vue'

  export default {
    name: "Main",
    components: { Calendar },
    data() {
      return {
        ...
      }
    },
  }
</script>

<style lang="scss" scoped>
  // Define Scss
  ...
</style>
```

# 元件化

## Main.vue

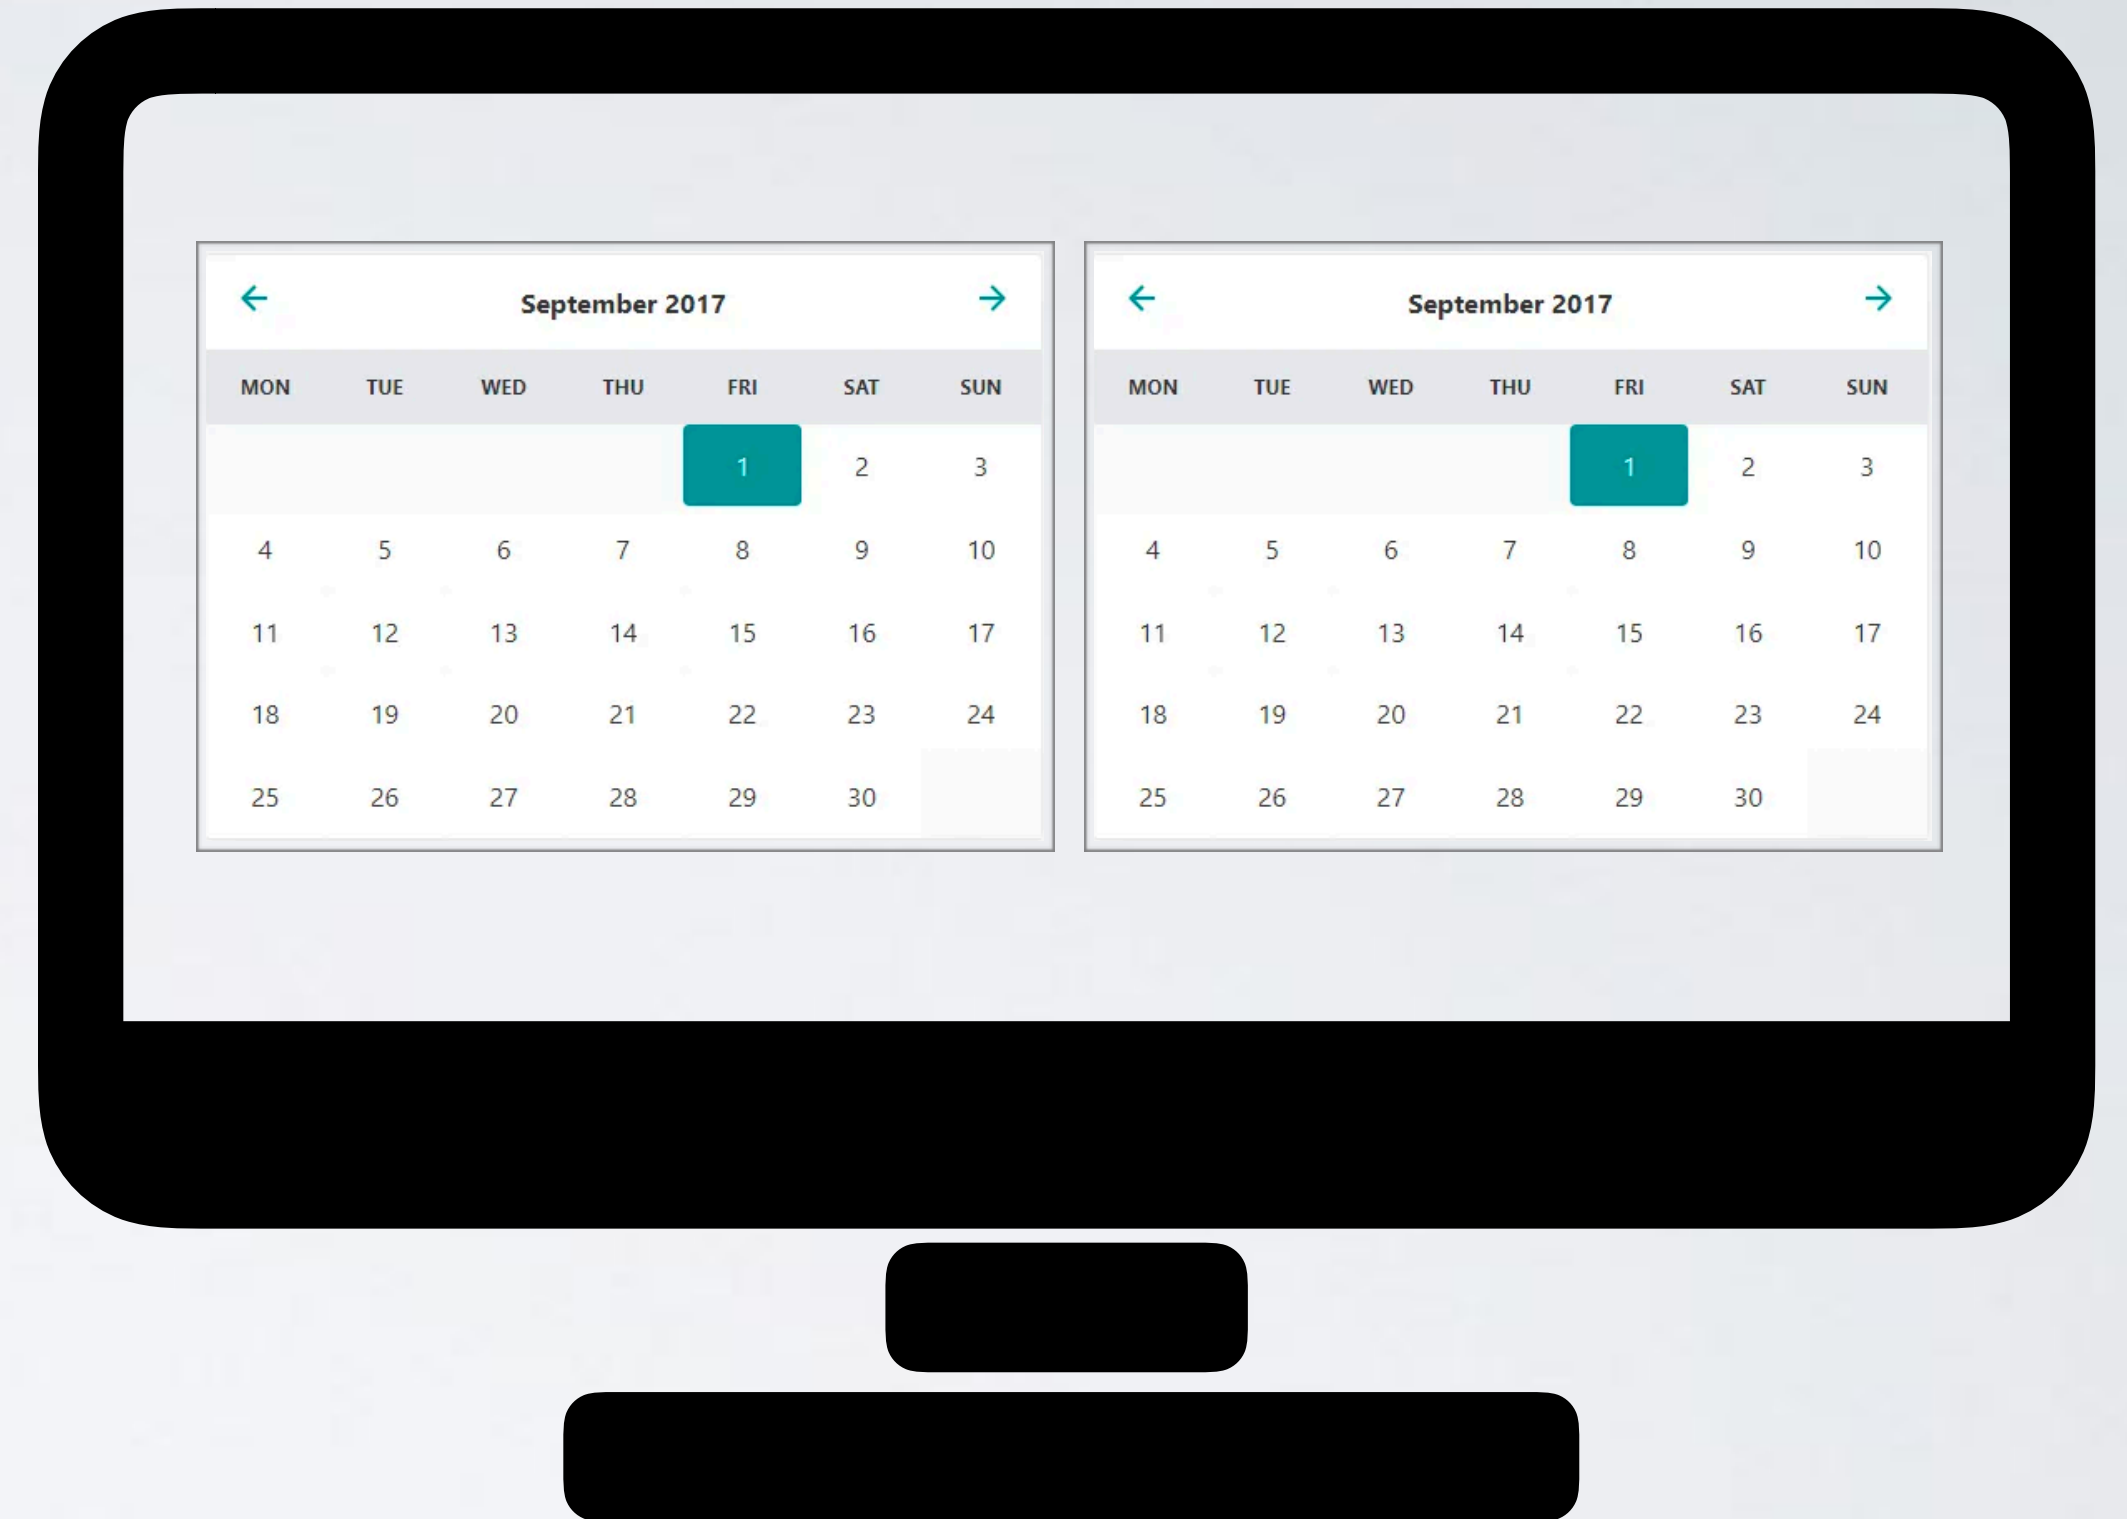

```
<template>
  <!-- Define Html Template -->
  <Calendar/>
  <Calendar/>
</template>

<script>
  // Define js logic
  import Calendar from 'Calendar.vue'

  export default {
    name: "Main",
    components:{ Calendar },
    ...
  }
</script>

<style lang="scss" scoped>
  // Define Scss
  ...
</style>
```

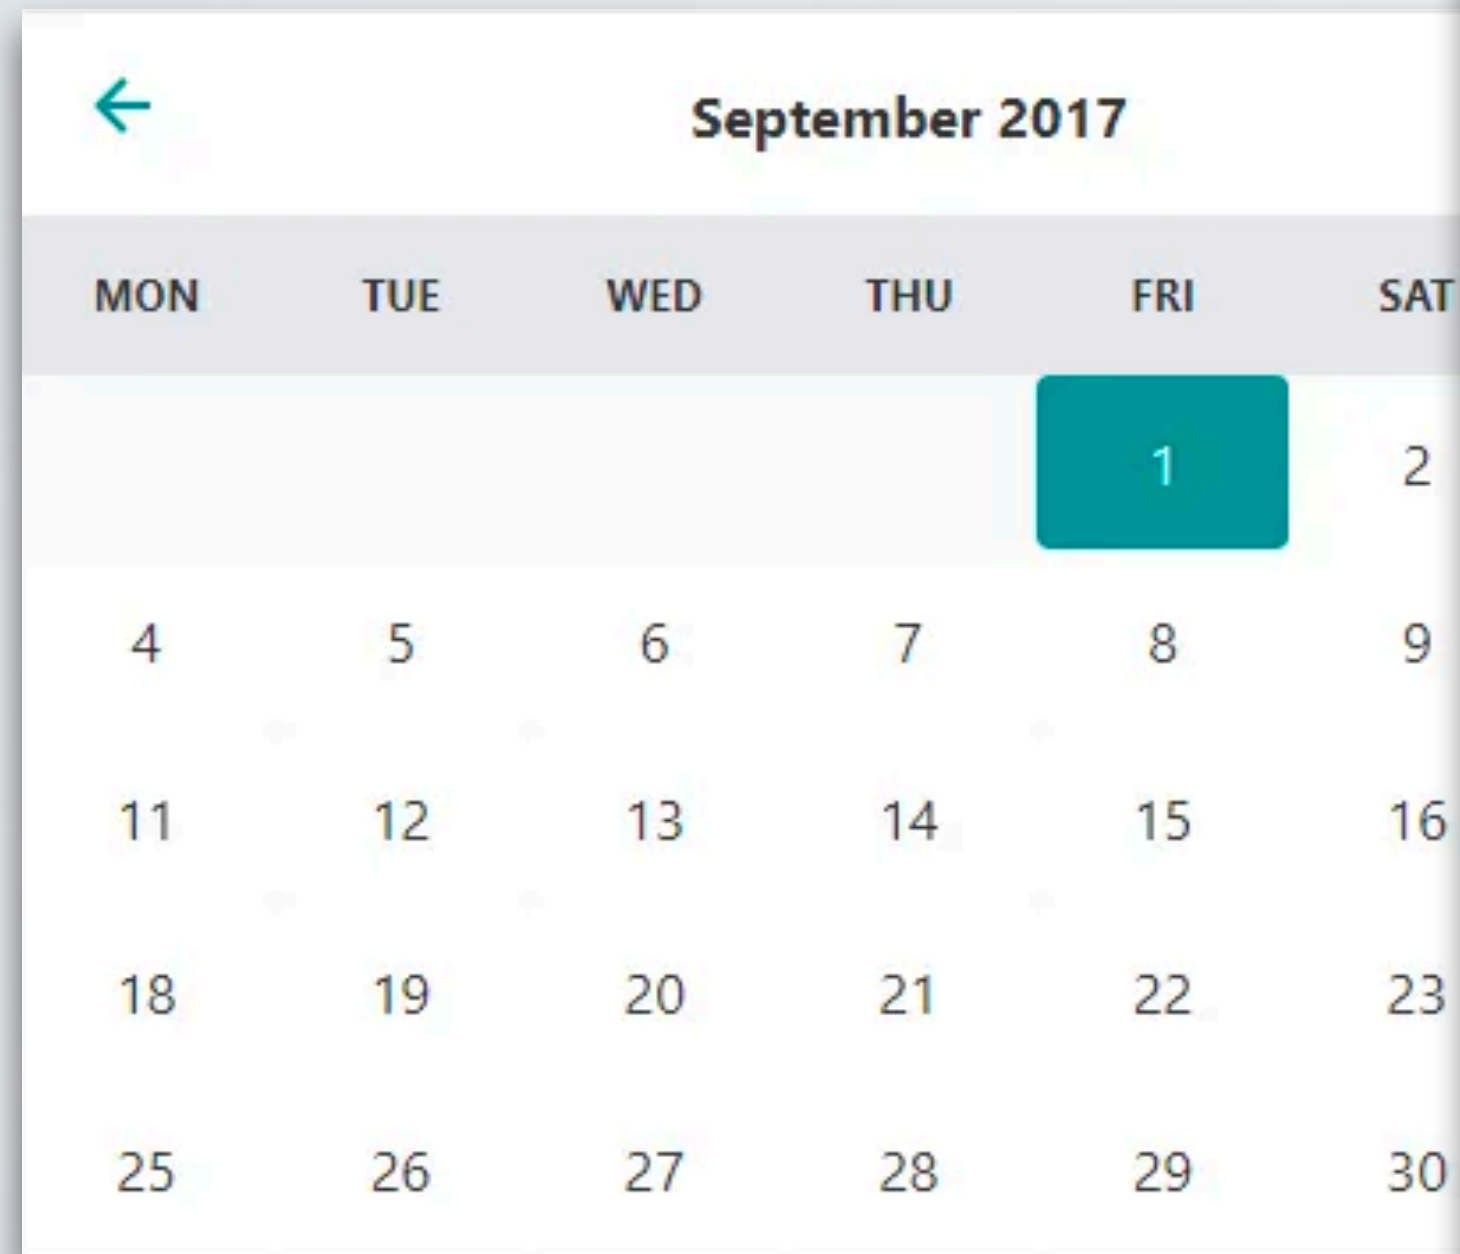

◎ Suedo Code以Vue為例

2個日曆各自有自己的狀態  
不會被另一個日曆影響

# 元件化

- ◎ Suedo Code  
以Vue為例
